SKILLS

Languages: Python, C, C++, TypeScript, Rust, Bash Scripting

Security: Burp Suite, eBPF, IDA Pro, Ghidra, Wireshark, GDB, Nmap, OWASP Top 10, MITRE ATT&CK

Technologies: Git, Docker, Kubernetes, GitHub Actions, Vercel, Cloudflare Workers, Railway

TECHNICAL EXPERIENCE

Software Engineer

May 2026 - August 2026

Google Summer of Code (GSoC) under Mandiant

Remote

- Extended the FLOSS malware string extraction framework with features derived from an experimental branch.
- Implemented a cross-platform PE/ELF/Mach-O executable parser for extracting binary metadata, sections and functions.
- Analyzed 150K+ malware samples to automate creating library string databases with CI/CD, slashing build times by 95%.
- Shipped a graphical web interface to visualize the tool's output reaching 100% CLI feature parity.

Security Engineer Intern

March 2026 - May 2026

NoHack Labs

Remote

- Conducted SAST assessments on real-world applications, identifying 20+ potential vulnerabilities.
- Delivered detailed VAPT documentation for scanned applications with extensive remediation guides for faster issue resolution.
- Retriaged discovered vulnerabilities and found 5+ critical issues in popular projects such as OpenClaw and AGHAST.

Undergraduate Researcher

September 2025 - June 2026

Dr. TMA Pai Endowment Chair (MAHE) and Schneider Electric

Manipal, Karnataka, India

- Built an AI security engine with 329K+ CVEs and 3.3K+ attack chains, coupling SAST, binary analysis and exploit testing.
- Cut complex audits by 12x, automating ATT&CK → D3FEND correlation, SARIF export, and interactive threat graphs.
- Shipped a regex-based reviewer at 3000 files/sec with 1000+ rules, flagging 23+ CWE classes with no API cost.
- Automated binary analysis with a sandbox and Radare2, with a confirm-patch-verify loop for agent-suggested fixes.

Software Engineer

May 2025 - August 2025

Code for GoodTech Dedicated Mentoring Program

Remote

- Created a FastAPI backend to parse and bulk-upload XLSForm files for validation, management and deletion.
- Deployed a modular Angular frontend with inline errors, reducing file validation and remediation time by 4x.
- Implemented comprehensive testing for frontend and backend components, leading to code coverage of over 72%.

ACHIEVEMENTS

- 1st Position, Smart India Hackathon 2024 at IIT Jammu under PSID 1749. **Dec 2024**
- 1st Position, GITxIITB Capture the Flag (CTF) sponsored by IIT Bombay Trust Lab. **May 2025**
- 1st Position, ISEA-ISAP hardware security hackathon organized at IIT Madras. **Jan 2026**
- Awarded a Shubhra Kar Linux Foundation Training Scholarship (LiFT), one of only 500 recipients worldwide. **June 2026**

PROJECTS

MFT Parser: Cross-platform C++ CLI for processing Windows artifacts with metadata extraction and deleted file recovery. Uses a portable CMake-based build system with recursive artifact detection.

NiteWatch: Digital Forensics tool for Linux filesystem recovery. Parses from raw bytes with no external libraries used, reconstructs B+ trees, and restores deleted files with full metadata. Uses PyQt GUI for visualizing inode structures and superblock parsing.

moomer: Rust application for capturing and interactively viewing high-resolution screenshots on macOS. Provides a zoomable, pannable view of the captured screen, integrated via AppleScript to manage window transitions and restore previous apps.

POSITIONS OF RESPONSIBILITY

Board Member and Forensics Subsystem Head

Cryptonite - Academic Cybersecurity Team

- Competed in weekly international CTF competitions, maintaining the team's top 3 national ranking for 2+ years.
- Planned, created and executed 10+ weeks of training material for junior team members spanning 2 domains.
- Authored 5+ security exercises for the team's flagship, international-level CTF with 3,500+ participants.

EDUCATION

Manipal Institute of Technology, Manipal

July 2023 - August 2027

Bachelor of Technology in Electronics Engineering (Minor in Computing)
