SKILLS

Languages: Python, C, C++, JavaScript, TypeScript, Rust, Bash Scripting

Frameworks: React, Next.js, FastAPI, Node.js, Tailwind CSS, Flask, HTML, CSS

Technologies: MongoDB, REST API, Git, Docker, Makefile, GitHub Actions, Vercel, Cloudflare Workers, Railway

Security: Capture the Flag (CTF), IDA, Wireshark, Volatility, GDB, Nmap, OWASP Top 10, MITRE ATT&CK, SAST

TECHNICAL EXPERIENCE

Software Engineer at Mandiant

May 2026 - August 2026

Google Summer of Code (GSoC)

Remote

- Worked on industry grade malware string analyzer FLOSS to extend its features from the experimental QuantumStrand branch.
- Implemented a binary executable parser supporting all major platforms, extracting relevant features, sections and functions.
- Automated library string extraction by analyzing 150K+ malware samples and adding CI/CD steps, reducing build time by 95%.
- Created and deployed a graphical interface to GitHub Pages using React to visualize tool output with full CLI feature parity.

Security Engineer Intern

March 2026 - May 2026

NoHack Labs

Remote

- Conducted SAST assessments on real-world applications, identifying vulnerabilities and testing real-world attack scenarios.
- Delivered VAPT documentation for each application with extensive remediation guides for faster issue resolution.
- Retriaged discovered vulnerabilities and found 5+ critical issues in popular projects such as OpenClaw and AGHAST.

Undergraduate Researcher

September 2025 - June 2026

Dr. T.M.A. Pai Endowment Chair

Manipal, Karnataka, India

- Working under Senior Professor Dr. Manohara Pai and Schneider Electric on AI-enabled security analysis and test case generation.
- Built a novel framework via LLMs to automatically parse CVE, CWE and MITRE ATT&CK databases across 335K+ records.
- Automated binary analysis using Radare with exploit generation and sandboxed verification in controlled environments.

Software Engineer at Dhvani RIS

May 2025 - August 2025

Code for GoodTech Dedicated Mentoring Program

Remote

- Created a FastAPI backend to parse and bulk-upload XLSForm files for validation, management and deletion deployed on Render.
- Engineered an XLSForm parsing pipeline with schema validation catching structural errors before any writes to MongoDB Atlas.
- Tracked 8 latency metrics (778ms cold start, 1.4-4s file validation, 5-5.4s form parsing) and auto-publishing of results.

ACHIEVEMENTS

- 1st Place in Smart India Hackathon 2024 at IIT Jammu. Built and deployed a novel Linux filesystem recovery tool. **Dec 2024**
- 2nd Place in MAHE Innovation Centre's SoftLaunch hackathon. Made a travel planner agent using the Gemini API. **April 2025**
- 1st Place in GITxIITB CTF held by KLS GIT Belagavi and sponsored by IIT Bombay Trust Lab. **May 2025**
- 1st Place in the Nova Genesis Hackathon. Created a real-time orbital collision risk prediction system using ensemble learning. **Oct 2025**
- 1st Place in the ISEA-ISAP conference's hardware security hackathon organized at IIT Madras. **Jan 2026**
- Awarded the Shubhra Kar Linux Foundation Training Scholarship (LiFT). One of 500 among 3500+ applicants worldwide. **June 2026**

PROJECTS

moomer: Rust application for capturing and interactively viewing high-resolution screenshots on macOS. Provides a zoomable, pannable view of the captured screen, integrated via AppleScript to manage window transitions and restore previous apps.

NiteWatch: Digital Forensics tool for Linux filesystem recovery. Parses from raw bytes with no external libraries used, reconstructs B+ trees, and restores deleted files with full metadata. Uses PyQt GUI for visualizing inode structures and superblock parsing.

MFT Parser: Cross-platform C++ CLI for processing Windows artifacts with metadata extraction and deleted file recovery. Uses a portable CMake-based build system with recursive artifact detection.

InstaFuel Assistant: Specialized AI assistant for a Fitness brand that uses RAG architecture to fetch product listings relevant to user requirement. Deployed using Railway for backend and Qdrant as vector database.

POSITIONS OF RESPONSIBILITY

Board Member and Forensics Subsystem Head

Team Cryptonite - Major Student Project

- Took part in weekly cybersecurity contests (CTFs) leading to the team finishing 3rd nationally in 2024 and 2025.
- Trained 10+ Junior Members in security techniques, tools, and methodologies, enhancing the team's overall skill set.
- Created and tested 5+ forensics and reverse engineering challenges for the team's international niteCTF with 3500+ players.

EDUCATION

Manipal Institute of Technology, Manipal

July 2023 - August 2027

Bachelor of Technology in Electronics Engineering (Minor in Computing)
